PROJECT CHARTER

Tour Ceylon (R26-IT-152)

IT4010 Research Project, Department of Information Technology, SLIIT

1. Project Information

Project title	Tour Ceylon: AI-based tourism safety and itinerary platform for Sri Lanka
Project ID	R26-IT-152
Supervisor	Mr. Buddika Harshanath
Co-supervisor	Prof. Samantha Rajapaksha
Start date	November 2025
Final presentation and viva	21 October 2026

2. Background

Tourists in Sri Lanka visit heritage sites, wildlife parks, beaches and wellness centres, but they often do not get timely information about crowds, emergency help or a suitable travel plan. Tour Ceylon combines four research components to solve this, with support from the Centre of Excellence for AI (CEAI).

3. Objectives

Main objective: To build and evaluate one platform that helps tourists stay safe, plan their trips and look after their wellbeing in Sri Lanka.

Component	Member	Objective
SOS Emergency System	De Silva D.S.K (IT22108654), Group Leader	Send incident reports with GPS location to the right responders
AI Itinerary Generator	Wanniarachchi P.M.R (IT22225092)	Create day plans based on preferences and travel time, using risk and crowd data
Wellness and Ayurveda Recommender	De Silva D.C.M (IT22108586)	Recommend wellness activities that match the traveller's health goals
Tourism Risk and Context Intelligence System	Abinaya R (IT22090058)	Predict crowd pressure and Low / Medium / High risk at tourist sites using Random Forest and context data

4. Scope

- Four research components, each with its own data, model or logic, and evaluation
- Flask REST services and React front ends to connect the components
- Research documents: TAF, proposal, progress presentations, individual theses, group report and research paper
- An information website for the project and its documents

5. Deliverables and Timeline

Deliverable	Date
Topic Assessment Form (TAF)	January 2026
Proposal submission	15 March 2026
Proposal presentation	16 to 18 March 2026
Progress Presentation 1	11 to 13 May 2026
Progress Presentation 2	31 August to 2 September 2026
Research paper submitted to ICAC 2026	4 September 2026
Draft thesis and website submission	11 October 2026
Final presentation, viva and website evaluation	21 October 2026
Final thesis submission	28 October 2026

6. Team Roles

Name	Student ID	Role
De Silva D.S.K	IT22108654	Group Leader, SOS Emergency System
Wanniarachchi P.M.R	IT22225092	AI Itinerary Generator
De Silva D.C.M	IT22108586	Wellness and Ayurveda Recommender
Abinaya R	IT22090058	Tourism Risk and Context Intelligence (crowd prediction)

7. Technologies

Python, Flask, scikit-learn (Random Forest), React, with one shared Flask backend for all components.

8. Risks

Risk	What we will do
Not enough real data for some components	Write down the data sources and clearly state any simulated data
Joining four separate components	Use the same API format and test the integration regularly
Tight deadlines	Track milestones and send early drafts to the supervisors

9. Success Criteria

- All four components work together in the platform
- Each component is evaluated and its limitations are stated
- All documents are submitted on time and the panel's feedback is addressed

10. Approval

Name	Role	Signature
De Silva D.S.K	Group Leader	
Wanniarachchi P.M.R	Member	
De Silva D.C.M	Member	
Abinaya R	Member	
Mr. Buddika Harshanath	Supervisor	
Prof. Samantha Rajapaksha	Co-supervisor
